Congratulations On Your Purchase of LaserMPrints/CL™ Color Laser Transfer Paper

Recommended Applications

White or light colored fabrics in polyester/cotton blends, 100% cotton fabrics, nylon, mousepads, silk, cardstock and rubber-backed coasters, puzzles, binders, cotton rag paper, leather, cork, hardwood (deciduous trees only), and other specialty items.

Characteristics

- Compatible with a wide range of color laser copiers and printers.
- Produces excellent results on a variety of fabrics.
- Allows you to transfer your images to fabric in seconds.

Imaging

- To separate paper, FAN as you would regular bond paper.
- Place paper in cassette tray (30+ sheets in cassette), or bypass tray, positioned to print on coated side.
- Select "Thick Stock" or "Transparency Mode" for proper printing. Consult your owner's manual for the procedure to select this setting.
- Select "Mirror Image" from File/Print/Properties of your application so that your image will be printed backwards.
- Press copy or output via computer interface to copier or printer.

NOTE: For dark originals reduce toner levels and lighten exposure level for a more accurate image. For clear areas use background elimination function or designate no-color.

Preparing

- Set heat press at 360°F (165°C) and at maximum workable pressure.
- Place garment on heat press and pre-heat for 5 seconds to eliminate creases and moisture.
- Trim away clear areas from around image.
- Place transfer in desired position on the garment with image face down.

NOTE: Paper is designed to work at high temperatures.

Pressing

T-shirts:	Press for 12-15 seconds – peel hot.
Sweatshirts:	Press for 20 seconds – rub for 8-10 seconds then peel.
Mousepads:	Press 5-7 seconds – wait 3-5 seconds peel hot.
Rubber-Backed Coasters:	Press 5-7 seconds – wait 3-5 seconds peel hot.
Cardstock Coasters:	Press 5-7 seconds – peel hot.
Fabric Binders:	Press for 15-20 seconds – peel hot.
	Position the binder on the heat press so that the metal rings are not in contact with the heat element of the press. Place transfer face down on the binder and cover with plain paper to protect the binder.
Fabric Puzzles:	Press for 20 seconds – peel hot.
Cardstock Puzzle:	Set heat press to 250°F and at maximum workable pressure. Place the transfer in desired position on the matte side of the puzzle with image face down. Cover with rubber heat shield. Press for 30-45 seconds. Peel hot in using a smooth motion.
	OPTIONAL: for a gloss finish place gloss finishing sheet, gloss side down, on top of the imaged puzzle. Cover with a rubber heat shield and press for 10 seconds, remove rubber heat shield and allow puzzle to cool before peeling gloss sheet.
Wood:	Method #1: Press at 375°F for 15 seconds—peel hot. Method #2: Press at 250°F for 30-45 seconds using a rubber heat shield—peel hot.
	Results may vary depending upon wood used. Test product for suitability. We recommend using light colored woods such as maple, fir or pine.

Heat presses are recommended for professional and satisfying results because home hand irons cannot reach the temperatures required for a reliable transfer. Standard transfers require anywhere from 350°-425° F and demand serious force in pressing… often from 40-80 psi.

Business owners, small or large, can afford to produce the highest quality laser transfers in-house and use the same printer for low cost high quality business printing.

Heat Press Set-Up

This transfer paper requires a high pressure setting to ensure a complete transfer. We recommend the use of a swing-away or air operated heat press for this application.

· Positioning the press: Position the press on a low, firm work-surface. The lower platen should be level with the operator's mid-thigh. The operator's body weight will further assist in closing the press, persons weighing less than 130 lbs. may have difficulty operating the press.

· Pressure Settings: Set pressure to the maximum the operator can manage by turning the pressure control knob to the maximum position, then ease pressure back until operator can just close the press. Preferred pressure is 60-80 PSI (pounds per square inch).

Optional Finishing Step

Once the image has been transferred using that item's regular instructions, place a sheet of regular plain paper over the image. Press for 5-10 seconds (do not exceed 15 seconds). Release press and peel the paper off while hot.

Washing Instructions

· Turn garment inside-out and machine wash in cool or warm water.
· Do not use bleach or fabric softener (including Bounce Dryer Sheets)
· Detergents with bleach additives are not recommended.
· Warm tumble dry.
· Iron at medium or hot setting.
· Do not dry clean.

Blank Imprintables

Condé carries everything a business-minded individual needs to get started including a full line of imprintables. LaserMPrints/CL can generate incredible revenue for screenprinters and embroiderers who want to offer a more versatile product line and generate revenue through short-run add on sales.

Mouse Pads
White polyester fabric fused to black rubber

Description	Part #	Dimensions
